

BATTERY MANUFACTURING

The Battery Manufacturing course is specifically designed for new and existing battery manufacturing production operators and technicians who want to develop their career pathways in lithium-ion battery manufacturing.

With a clear focus on electrode manufacture, cell assembly, FA&T, module and pack and the relative health and safety topics, the course programme is geared to supporting UK plc address its need to embed a highly skilled technical workforce in preparation for the forecasted roll out of 8 Gigafactories, each with an average production supply of capacity of 15GWh Per Year.

This 3 day non-accredited continuous professional development course is provided by REVAMP Training Limited from its dedicated training centre at North Seaton, Ashington, Northumberland. All prices available upon request via: info@revamptraining.co.uk or by contacting +44 1642 220778.

Topics covered will deliver knowledge, skills and understanding across a range of disciplines including:

Battery Background Knowledge.

Battery Fundamentals & Electrical Theory.

Lithium-ion Batteries.

Working in a Gigafactory, (Electrode Manufacture, Cell Assembly, FA&T Module & Pack).

Working in a Gigafactory, (Safety Topics).
